About Us:

Omniquad is a security software company that has developed many trailblazing software solutions for Internet, email and network security for enterprise and home users. Established in 1995, Omniquad has been consistently innovating and evolving newer and better solutions to provide its users the very best defense against the vagaries of the Internet.

Omniquad has its headquarters in London and channel partners in most parts of the world. Many small and big businesses, government departments, educational and religious institutions, use Omniquad products or services to secure and manage their network and related security issues.

While Omniquad's cutting edge solutions have earned both industry acclaim and media recognition, to us our best reward is the wealth of positive customer feedback we have received. Over 95% of Omniquad users recently surveyed were happy and would recommend our products and services to others.

Omniquad' s foray into managed services has been well received as a natural extension of our core competencies.

Mission Statement:

To empower businesses by delivering managed services leveraging on our expertise and core competencies in the email management domain.

Our Portfolio:

Omniquad' s portfolio includes a bouquet of products and services encompassing the whole gamut of Internet security solutions. Our Enterprise product line includes Enterprise Manager and Mailwall.

Enterprise Manager is a complete network management and monitoring solution. This centrally managed network security suite includes Surfwall for web content filtering, AntiSpy for spyware detection and removal, Activity Monitor for real-time user activity monitoring, Inventory Tracker for workstation inventory auditing, network security tools for application restrictions, Instant Remote Control and more.

Mailwall is an e-mail content security management solution. It is designed to identify, analyse and filter all types of e-mail threats, including spam, viruses and illicit content.

Total Security Suite catering to the SOHO segment, is a comprehensive Internet Security Suite designed to secure the user' s computer from threats arising on the Internet. It includes modules like AntiVirus, AntiSpyware, Personal Firewall, SPAM Blocker, MyPrivacy (IE and Windows cleanup tool), Anonymous Surfing, Password Organizer, File Encrypter, Parental Control, File Shredder and Popup Blocker all with the aim of enabling users to work securely on their systems safe from any online and / or offline threat.

We also offer some niche products like Instant Remote Control and Desktop Surveillance Tool.

Omniquad' s varied competencies in all these products is best represented by our Managed Services- A comprehensive set of services covering all aspects on Internet security including e-mail, web content management and vulnerability assessment.

Omniquad Mailwall Remote manages mails for many companies around the world. Omniquad's superior Mailwall technology forms the basis of the Mailwall Remote Managed E-mail Service. Processing millions of e-mails has also given Omniquad that valuable edge in a rapidly expanding sphere... experience.

Mailwall Remote blocks all kind of malicious e-mails like Spam mails, virus infected e-mails, phishing attacks while at the same time also providing options to enforce e-mail policies and keep the entire e-mail management system under control. With multiple operation centres around the globe, monumental infrastructure, 24/7/365 phone and chat support, 99.99% uptime, Mailwall Remote stands tall on reliability. With its rich user friendly interface, management reporting system and evolved, reliable engine, it is one of the most mature, tested and stable mail scanning solutions available in the market today.

Surfwall Remote can protect your entire network against all types of web threats without the need for any software, hardware, updates or maintenance. The Service offers web protection against viruses, malicious web sites, web spyware and offensive content using one managed service. Various options to customize access and scanning policy for different set of users, viewing management reports, etc helps you manage your network security in the most convenient way.

Omniquad E-mail Archiving Service offers secure off-site archiving of external as well as internal e-mail received within your organisation. This instant-on solution does not require any special hardware or software, and is completely integrated within the Mailwall Remote e-mail screening service. The Benefits and Features offered under E-mail Archiving Service will help you secure and protect your data with saving you man-hours and considerable amount of cost.

Omniquad Border Secure is a service that performs network audits — it identifies security vulnerabilities and weaknesses on networks. The information can be used to assess security, manage risks, and eliminate security vulnerabilities before third parties can take advantage of potential security holes on your network.
